50+ Hotels turnkey	30+ Organizations	80+ Offices
-----------------------	----------------------	----------------

Openly considering jobs and projects — remote, in the office and on-site. If you need someone who combines hardware, software, networks, automation, photo/video and people skills — get in touch.

UT

My name is Nika Tsulaia. My path in IT started in my student years in Russia: part-time sales consultant at a computer store, then store manager, service center technician, and eventually head of the service center. There, after relocating, I moved into software sales — learning to see business from both technical and commercial sides.

In Abkhazia I became what you might call a digital pioneer: as early as 2011 I set up remote video surveillance access from a phone — when most people still saw it as science fiction. I worked in banking IT, ran my own service center, held contracts with organizations, trained staff, and helped grow digital literacy across the region.

At the peak of my practice I simultaneously supported 30+ organizations: offices, shops, hotels, restaurants. Delivered 50+ hotels turnkey, equipped ~15 restaurants and ~80 offices — networks, Wi-Fi, video surveillance, POS, automation. I handle everything tech-related so the business "just works".

KEY ACHIEVEMENTS

- 50+ — Hotels Turnkey: Network, Wi-Fi, video surveillance and basic automation — 50+ properties ready to operate from day one.
- 30+ — Organizations Supported: Simultaneous support for offices, shops and service companies in one district — updates, monitoring, on-site and remote help.
- 80+ — Offices & HoReCa: About 80 offices and 15 restaurants: workstations, POS, networks and CCTV — from launch to daily operations.
- KPI — Business Dashboards & Tracking Systems: Clear dashboards and practical systems built with HTML, JavaScript, Excel and Google Sheets for production, inventory, reporting and daily operations.

English	Basic

SKILLS

- IT & Web**
Business dashboards, websites and internal web tools · Next.js / React / HTML / CSS / JavaScript · Excel and Google Sheets: tracking, reporting and data visualization · CMS and site builders
- Software Development & Factory Automation**
Internal systems for manufacturing companies · Production, warehouse, personnel and reporting automation · Dashboards, KPIs, operational tracking and data visualization · Process analysis and conversion of manual operations into digital workflows
- Hardware Specialist**
Hands-on device repair: I find the fault, replace parts or reconfigure — so laptops, phones and PCs work again. Built on years in a service center and field practice.
PCs and laptops: diagnostics, cleaning, thermal paste, RAM/SSD/HDD upgrades · Smartphones and tablets: screen, battery, ports, firmware · OS reinstall, drivers, data recovery · Peripherals: monitors, printers, keyboards, routers

EXPERIENCE

Software Developer & Factory Automation Specialist

February 2026 — Present

FiberCell Technologies LLC · Tbilisi, Georgia

- Developing internal software for a manufacturing company

Leadership & Communication

Documents and proposals: Word, Excel, Google · Technical documentation and estimates · Service center management, training · B2B contracts, software sales and rollout · Banking IT infrastructure

CONTACT

I now live in Tbilisi. I had to leave my previous work and projects because of my son's health — he needs rehabilitation, and the necessary support is available here.

I build business dashboards, Excel and Google Sheets systems, internal web tools, product listings and polished visual content. I also provide photo and video editing and hands-on hardware support. I developed this portfolio site myself. I am available for remote and local projects where accuracy, clear interfaces and practical results matter.
